

REEL 9X12

Loading instructions

Insert film into the reel carefully while bending the film. Avoid scratching the film against center piece hooks. This film holder can hold up to 4 sheets of 9x12 film.

- 1 Place the reel vertically on a surface and insert the film emulsion side inside.
- 2 Push the film in until it is secured behind the hook.
- 3 Rotate the reel 90° degrees and repeat the process with other films.

Chemical consumption:

Rotary agitation -

Multi-reel 3 tank	350ml
Multi-reel 5 tank	500ml
Multi-reel 8 tank	750ml

Vertical agitation - Use a minimum of 950ml of chemicals per reel

Note:

Using more chemicals than suggested for rotary agitation may cause a white band of undeveloped film that run lengthwise, right behind the center hook. To avoid scratching your film during loading and unloading, practice using thumb to lift the centre hook slightly off the film.

Thank you for choosing the
Vintage Visual 9x12 reel.
